September 2024

WITTMANN extends its service for temperature controllers in Germany

With the installation of a further test stand, the WITTMANN Group has strengthened its service portfolio in Germany. In addition to the facility in Nuremberg, the subsidiary in Meinerzhagen now also offers servicing and repairs for temperature controllers.

The investment at the Meinerzhagen facility includes a test stand for temperature controllers plus the establishment of a spare parts depot. In this way, WITTMANN has extended its capacity significantly and shortened the lead times for servicing and repairs of temperature controllers. Temperature controllers, either sent in or brought in, are now back again on the customers' premises ready for use much faster.

Meinerzhagen region is an important center of the German plastics processing industry. "We have many customers in this area, who are now able to simply bring us their temperature controllers", says Jürgen Kreissl, Division Manager Service and Infrastructure of WITTMANN in Germany. "More and more customers send us their temperature controllers regularly for preventive maintenance. This increases the uptime of the devices and thus drastically reduces the risk of malfunctions and standstills on our customers' production floors. By this service we also reduce the pressure on our customers in times of skilled labor shortage."

The WITTMANN Group

The WITTMANN Group is a globally leading manufacturer of injection molding machines, robots and auxiliary equipment for processing a great variety of plasticizable materials – both plastic and non-plastic. The group of companies has its headquarters in Vienna, Austria and consists of two main divisions: WITTMANN BATTENFELD and WITTMANN. Following the principles of environmental protection, conservation of resources and circular economy, the WITTMANN Group engages in state-of-the-art process technology for maximum energy efficiency in injection molding, and in processing standard materials and materials with a high content of recyclates and renewable raw materials. The products of the WITTMANN Group are designed for horizontal and vertical integration into a Smart Factory and can be interlinked to form an intelligent production cell.

The companies of the group jointly operate ten production plants in six countries, and the additional sales companies at their 35 different locations are present in all major industrial markets around the world.

WITTMANN BATTENFELD pursues the continued strengthening of its market position as a manufacturer of injection molding machines and supplier of comprehensive modern machine technology in modular design. The product range of WITTMANN includes robots and automation systems, material handling systems, dryers, gravimetric and volumetric blenders, granulators, temperature controllers and chillers. The combination of the individual areas under the umbrella of the WITTMANN Group enables perfect integration – to the advantage of injection molding processors with an increasing demand for seamless interlocking of processing machines, automation and auxiliaries.
