Press Release **July 2026**

WITTMANN in Germany Strengthens Sales in the Material Handling Sector

With a new sales structure, WITTMANN in Germany is responding to the growing demand for complete systems for plastic material supply. Plastic processors in northern Germany now have two dedicated, permanent points of contact.

“We can now respond even more quickly to the needs of our customers in northern Germany,” says Alexander Paech, Sales Manager for Automation and Auxiliaries at WITTMANN BATTENFELD Deutschland. “With Jörg Schröer and Gunnar Dieckhoff, we now have two dedicated contacts for the region, both of whom bring many years of experience with products from the WITTMANN Group.”

Jörg Schröer has been a sales partner of the WITTMANN Group for more than 20 years. He is now assuming overall responsibility for material handling projects in the region. Gunnar Dieckhoff is moving from the Standardization department to the Material Handling division and will be responsible for the project planning of material handling systems. He has been with WITTMANN since 2017.

The new structure underscores WITTMANN’s high level of expertise in providing complete solutions from a single source. The Meinerzhagen location will be even more closely aligned with the WITTMANN Group’s entire product portfolio. While the two German locations in Nuremberg and Meinerzhagen had long focused on different business areas, visitors can now experience all products firsthand at both sites—from material handling, injection molding machines, mold temperature control, and automation to in-line recycling and digital technologies. Auxiliary equipment, robots, and injection molding machines are offered both as standalone units for combination with injection molding technology from other brands and as integrated solutions from a single source. “With complete solutions, we can precisely coordinate all components of the production cell from the very beginning, thereby maximizing efficiency and quality potential,” says Paech. Together with partners, WITTMANN also integrates cleanroom solutions into the overall concept.

The facilities at the technical centers are available to customers and interested parties for material and mold testing, joint development projects, and application-specific consulting.

Gunnar Dieckhoff is the new contact person for the project planning of material handling systems.

The WITTMANN Group

The WITTMANN Group is a globally leading manufacturer of injection molding machines, robots and auxiliary equipment for processing a great variety of plasticizable materials. The group of companies has its headquarters in Vienna, Austria and consists of two main divisions: WITTMANN BATTENFELD and WITTMANN. Following the principles of environmental protection, conservation of resources and circular economy, the WITTMANN Group engages in state-of-the-art process technology for maximum energy efficiency in injection molding, and in processing standard materials and materials with a high content of recyclates and renewable raw materials. The products of the WITTMANN Group are designed for horizontal and vertical integration into a Smart Factory and can be interlinked to form an intelligent production cell.

The companies of the group jointly operate ten production plants in seven countries, and with additional sales companies at 35 different locations they are present in all major industrial markets around the world.

WITTMANN BATTENFELD pursues the continued strengthening of its market position as a manufacturer of injection molding machines and supplier of comprehensive modern machine technology in modular design. The product range of WITTMANN includes robots and automation systems, material handling systems, dryers, gravimetric and volumetric blenders, granulators, temperature controllers and chillers. The merger of the individual areas under the umbrella of the WITTMANN Group enables perfect integration – to the advantage of injection molding processors with an increasing demand for seamless interlocking of processing machines, automation and auxiliaries.
